

## **One Year Workshop On Fixed Orthodontics At Nagpur**

Orthodontics is not all about wire bending. In fact, nowadays everything is available in the market in preformed manner. Orthodontics is about precision. It's about creating beautiful smiles. It's about job satisfaction. Our orthodontic workshop is designed in such a way that the general practitioner can start working on new cases right after the first module. We encourage our students to keep orthodontic patients ready in their own clinic so that they can start working on their own patients immediately after the first module and continue with the treatment protocol as the course progresses. This way the course fees can be generated as the modules continue.

Each module comprises of lectures and demonstrations in the morning and noon hours followed by its applications on patients in the afternoon post lunch.

The course has been simplified to train any level of General Dentist to add orthodontics into their practice.

### **Course Highlights:**

The total workshop duration is 16 days spread in 8 modules over a period of a year. Each module is of 2 days. The 1st 4 Modules are held in consecutive months and remaining 4 modules in every alternate month.
